Snom 360 IP Phone

Next Generation VoIP Phone

Designed for maximum productivity and efficiency in the everyday business environment. Dedicated keys provide you with direct access to the functions for audio and call control, and context-sensitive menus offer you the additional functionality that you may need at any given moment. The graphical display can be tilted for optimum reading angle.

Customized ring tones can be downloaded without any hassle from the web server - including, of course, that catchy ring tone that you like so much. Incoming calls can be marked with special ring tones to indicate the destination of the call.

12 programmable keys can be used to customize the functionality according to your own specific needs. The LED behind the corresponding function keys can show you whether or not your colleagues are currently on a call. And of course your colleagues can see whether your line is free or not.

The new mini browser, embedded in snom's top-of-the-line 360 executive SIP phone, lets users and developers create web-driven, screen-based telephone applications. Examples include custom contact-center apps, web-based phone directories, messaging, posting of news and other info on telephone screens, and more.

To spare you the annoyance of unwanted invasions on your speech data, the snom 360 supports the security standard SRTP - a current specification from the Internet Engineering Task Force (IETF) for protection against eavesdropping and the stealing of data.

Snom 360 Main Features

- * Tilttable graphic display (128 x 64 pixels)
- * 12 Programmable function keys
- * Full duplex speakerphone
- * Dual Ethernet connectivity
- * 802.3af PoE support
