Vega 6x4 Gateway

Flexibility and Simplicity

The Vega 50 6x4 enables a range of legacy telephony equipment, including PBXs, key systems and analogue handsets to take advantage that a VoIP enabled network offers. With 4 port FXS, FXO and BRI Modules available the Vega 50 6x4 can be configured to address any non-PRI environment.

Configuration options are country independant enabling the Vega 50 6x4 to be used across the globe, thereby making it easier to deploy for a wide variety of applications. Using Open (Non Proprietary) configurable interfaces the analogue Vega 50 6x4 supports industry standard connection and disconnection signalling resulting in high levels of interoperation with a wide range of existing telecommunications systems.

Safety first, the Analogue Vega 50 6x4 units are equipped with two FXO interfaces (PSTN facing) so when powered the Vega 50 will route calls to or from these interfaces, however if the power should fail the two FXO ports provide a hard-wired bypass feature connecting the first two FXS ports, allowing calls to be made giving resilience and confidence of business continuity, even under power failure conditions.

Main Features

- * Desktop or 19" Rackmount
- * Supports up to 6 four port interfaces (factory fit)
- * 4 to 24 port FXS interfaces
- * 4 to 24 Port FXO interfaces
- * additional 2 FXO ports for PSTN Lifeline
- * 4 or 8 Port Basic Rate ISDN (BRI)
